David Adams

Business Operations and Data Systems
Pasadena, CA | davidwhittemoreadams@outlook.com | davidadams.io | LinkedIn | GitHub

Professional Summary

Data science graduate student with a business and marketing background who designed, built and runs the operations platform a North Hollywood media-storage business uses every day: inventory, orders, purchasing, QuickBooks data and sales. Owns systems end to end, from the database and integrations to the people who use them.

Education

University of Colorado Boulder | MS in Data Science, in progress (online) Expected 2027 | GPA 3.7
Coursework: probability and statistical inference, algorithms, relational databases and SQL, data visualization
University of Idaho | BS in Business, Marketing December 2021

Skills

Data: SQL (PostgreSQL), Python (pandas, scikit-learn), R, database design, statistics, backtesting
Systems: FastAPI, Next.js, Docker, Linux, API integrations (QuickBooks, eBay, Apollo), Cloudflare, QNAP NAS
Business: QuickBooks Desktop, Excel and Office, inventory, purchasing and vendor pricing workflows
AI tools: Claude Code and Codex for development; language-model pipelines with fact-checked, rule-bound output

Professional Experience

Inventory & Logistics Coordinator Sep 2025 – Present
IVB Media Services | North Hollywood, CA

- Designed, built and maintain the company's internal operations platform (FastAPI, PostgreSQL, Next.js on Docker) covering inventory, sales and purchase orders, serial-number receiving, returns, user roles and reporting.
- Connected the platform to QuickBooks Desktop through read-only exports imported every 30 minutes, keeping QuickBooks the book of record and closing purchase orders automatically once QuickBooks marks them received.
- Automated eBay fulfillment: shipped orders post tracking back to eBay, record a delivery signature and send the office an "OK to invoice" email; will-call pickups are signed on a phone at the counter.
- Merged 48 duplicate SKUs and placed every active item in a 39-category taxonomy.
- Built a sales lead engine that finds purchasing decision-makers at customers and prospects through the Apollo API within a monthly credit budget, ranks accounts, and drafts first emails that one language model writes and a second checks against claims the company can prove.
- Run shipping and receiving independently; building distributor price comparison for purchasing.

Projects

Prediction-market research and trading system 2026

- Built an automated research and trading system for Kalshi prediction markets: scheduled data collection, weekly model retraining and hard risk limits (drawdown-based size cuts and a daily stop).
- Test ideas on held-out data with rules fixed in advance; in one study 103 variants across 9 directions were evaluated and none reached live trading.

Data science portfolio github.com/daviddaadams

- A/B test analyzer, anomaly detection, churn prediction, image classification, named-entity recognition, recommender system, sentiment API, forecasting, and an ETL pipeline with a star schema.

Earlier Experience

Marketing Associate, Rosewood Revitalization Group: email campaigns and community outreach 2021
Marketing Team Member, Palouse Properties: website redesign and a rental-season marketing plan 2020
Sports Journalist, Page6Sports: ran the college football section; feature carried by Bleacher Report 2016–2018
